

# SYNTHÈSE PAR ENJEUX DES INDICATEURS DE GESTION DURABLE DES FORÊTS MÉTROPOLITAINES

Jean-Luc Peyron

[dans le cadre de l'édition 2015 des indicateurs](#)

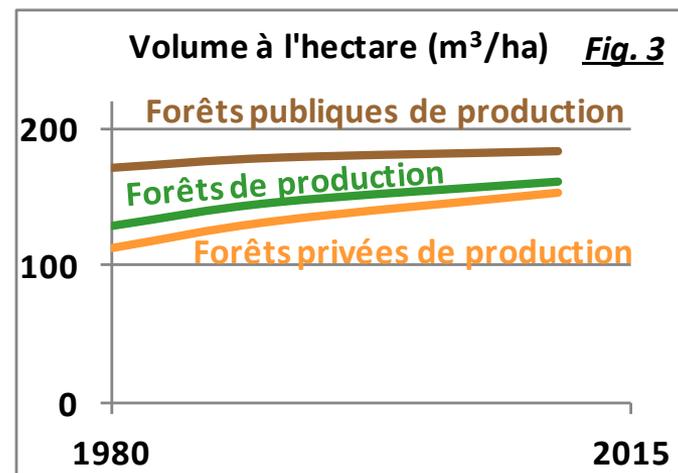

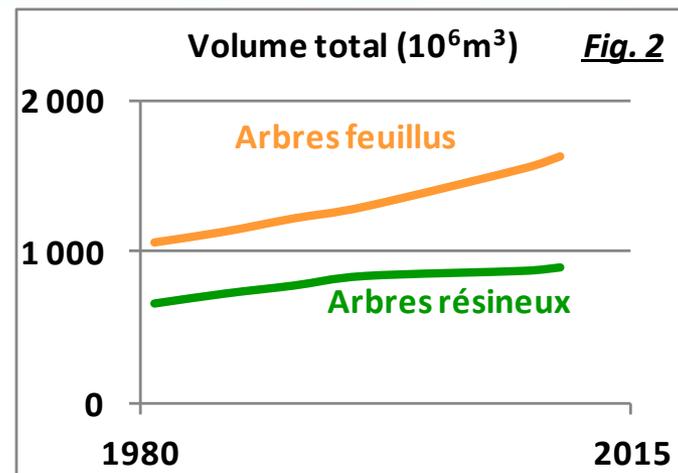

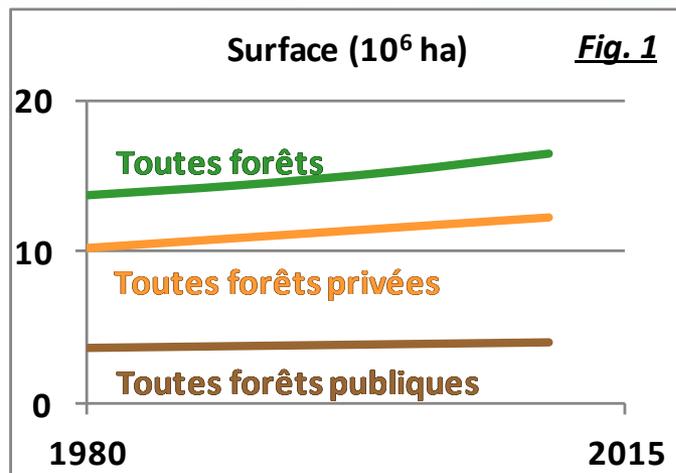

- Par grands enjeux (de E1 à E8)
- A partir des indicateurs issus des critères (C1 à C6)
- Sur 1980-2015 (données moins robustes en pointillés)

- **Dynamique générale des ressources**
- **Prélèvement renouvellement**
- **Déterminants de gestion**

## MISE EN ŒUVRE DE LA MULTIFONCTIONNALITÉ

- Démarches de gestion durable
- **Vision globale**
- Les ressources augmentent tout en maintenant des caractéristiques importantes pour la biodiversité et un état de santé satisfaisant
- Des points de vigilance subsistent :
  - Taux de prélèvement faible en moyenne
  - Certains habitats
  - Aires protégées en deçà des objectifs
  - Poids des accidents climatiques
  - Défi du changement climatique
  - Espèces invasives, pathogènes, ravageurs
- Les forêts sont importantes pour la société, les activités économiques et l'environnement
- Les indicateurs progressent tout en mesurant les progrès de la gestion durable des forêts.
